

# pedocs

the Open Access Partner for Publishers

[www.pedocs.de](http://www.pedocs.de)

the repository at the German Education Portal

**pedocs creates global and free access to educational research literature**

**peDOCS**  
Open Access Educational Science

### **Become a partner of pedocs and gain the following benefits:**

- ▶ an additional distribution channel for your publications
- ▶ optimal visibility of your publications within the discipline's scientific context
- ▶ exposed ranking position
- ▶ increase of citation ratios
- ▶ professional marketing partnership
- ▶ monthly download statistics

pedocs, the repository of the German Institute for International Educational Research, collects educational scientific and subject didactic literature and makes it openly accessible to the public. To assure consistent citation, pedocs predominantly acquires full texts in their published form. To this end, pedocs already cooperates successfully with a broad scope of publishers and editors.

We guarantee our partners the unconditional protection of copyright and a portal setting that is highly accepted by the scientific community and assures optimal visibility of the publications.

Furthermore, pedocs collaborates with the German National Library (DNB) to provide long-term-availability of the full texts through pedocs.

### **Optimal visibility of your publications – global and long term**

The assignment of a persistent identifier (URN) renders full texts in pedocs available long term and globally through:

- ▶ German Education Index – the most important German language index in the discipline
- ▶ Google and other search engines
- ▶ scientific search engines, e.g. BASE and OAIster
- ▶ the online catalogue of the German National Library (OPAC)

### **Models of co-operation**

pedocs strives to develop and foster a strong basis of co-operation and offers publishers different models for secondary publications through pedocs:

- ▶ reissuing of works out of print
- ▶ publishing of contributions from collective works or journal articles with a strong teaser effect for the promotion of the complete work
- ▶ co-equal issuing of print and open access publication
- ▶ retro-digitisation of not yet electronically available publications in exchange for issuing them openly accessible through pedocs

We also offer publishing houses an opportunity to launch original publications through pedocs. Take advantage of this possibility e.g. for issuing additional material, research data or for publications that have been excluded from a printed volume due to lack of space or even for works for which you would like to test responses prior to a print publication.
